

Usability/Accessibility

Error-Free

This website provides zero coding errors based on the results of the w3schools HTML5 and CSS code validator tools.

Images

For each image on this website, I created an alt text. This allows users to see what the image should be even if an image does not appear. This is important so that the website is compatible with all browsing situations and provides users with the full website information.

Browser compatibility

This website is compatible with Chrome, Safari, and Firefox. This makes it versatile and able to be used in any browsing situation

Simplicity

This website follows a very simplistic approach. All of the information is on the main page. Any link that is clicked opens the pdf or website in the same window, thus reducing the number of tabs being open. This simple approach makes all the information for a viewer visible in one place and they do not have to search through many links to find what they are looking for.

Usability

The usability of this website is very important. Users, such as future employers, need to be able to find the important accomplishments and experiences in a professional and easy to find place. This website is very easy to use and very easy to find the necessary information for a user.

Visibility

This website has zero contrast errors, meaning the website colors are compatible with each other. The website also provides a simple and clean title as well as a user-friendly website. There are lines to divide different sections such as the bio part and the audio and video section. There are also shapes/images that represent links to different social media websites, projects, and reports.
